

CSI: Crime Scene Investigation

What is it?

This is a new, unique and fun experience which provides a great opportunity for you and your colleagues to mix and mingle whilst getting to know each other better.

The event has been designed for MotivAction, and is led by former Senior Detectives – bringing real authenticity and professional insights to the fun!

How does it work?

Someone has been found murdered at your chosen venue. Over the space of the session, teams will investigate the crime using real forensic equipment and with the expert guidance of our former detective.

Communication and planning are crucial as teams will be entering uncharted territory! The crime scene will produce some interesting clues; fingerprints, blood spatters, teeth marks (forensic dentistry), bullets (ballistics analysis) and hair/fibre evidence.

Finally, you will use FBI software to produce a “photo fit” of your suspect. The case needs to be solved and a conclusion reached!

Each team will be presented with a briefcase containing all the state of the art forensic equipment needed to complete the investigation.

All the aspects of the activity can be fitted around a meal or buffet if an evening activity session is required.

Incident Room

A crime scene is set up; grizzly or otherwise! We lay down protective sheeting so there's no need to worry about the blood spatters ruining your office or hotel carpet!

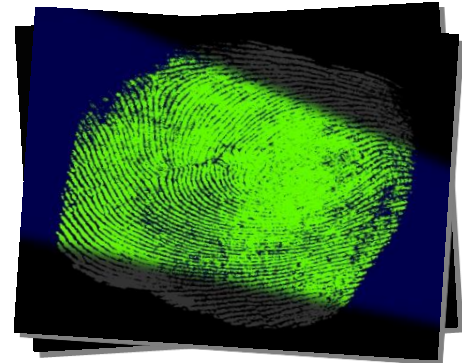

Guests are divided into CSI Teams. You will receive everything you need for the investigation, including dossiers on 3 prime suspects; why not include a twist and make the suspects members of your group? Teams also receive a full CSI Kit and of course the obligatory SOCO white suits, gloves and masks.

So what is the motive? How was the person murdered? What evidence have you got to connect the suspect(s) to the crime scene?

What's involved?

How good are you at investigating a murder case? You will need to undertake some, or all, of the following:-

- Taking and removing fingerprints from a variety of surfaces
- DNA
- Forensic dentistry
- Hair & fibre analysis
- Constructing photo fits (using FBI software)
- Blood spatter pattern analysis
- Ballistic examination (bullets) and more!

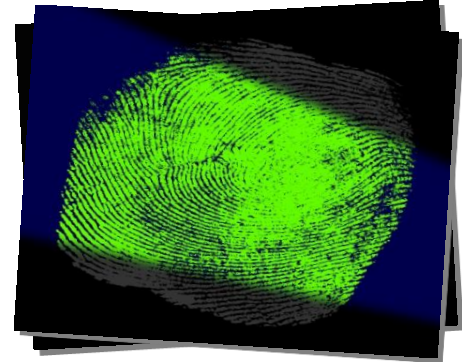

CSI: Crime Scene Investigation

What's included?

- An experienced professional to present and run the event and provide guidance on the various techniques you will need to use
- Full CSI equipment and case file for each team
- Use of state of the art CSI equipment
- Scoring for each team leading to a winner
- Prizes for the winning team

What are the benefits and Outcomes?

- Guests can meet informally
- Have fun working together
- Team bonding through an entertaining task
- Tests and sharpens lateral and logical thinking
- Improved communication and questioning
- Achievement and satisfaction, having brought the killer to justice!
